

**GARDEN&DIY**

## your business is our business

The innovative proposals by TENAX are the result of the Italian multinational's commitment since 1960, specialising in plastic polymer extrusion.

TENAX's know-how of the garden and outdoor market also developed in collaboration with leading Italian and European distributors, was a decisive factor in **manufacturing a vast and specialist range of meshes and plastic products that are functional, easy to use and long lasting for fencing, protection, care and decoration of the outdoors.**

TENAX also offers its clients multiple tools and solutions to customise sales points, enhance display space and improve sell-out: from the modular systems designed to adapt to different sales point layouts, to self-standing displays for self-service solutions and cutting by the metre.

The objective is to always ensure our success becomes **your success.**

# Plastic, Quality, Environment

Plastic has changed the world and the way we live: it is versatile, practical, inexpensive and colourful and does not require maintenance. Most of all, it makes daily living easier.

TENAX meshes are manufactured with prime quality polymers and additives carefully selected to guarantee colour and the characteristics of the products stand the test of time. They do not contain lead or other heavy metals, are non-toxic and 100% recyclable to safeguard consumers and the environment. The manufacturing processes are constantly and rigorously controlled and certified according to the strictest European quality standards. TENAX products are used in five sectors: gardening, agriculture, construction, geotechnics and industrial applications.

## TENAX's strengths

- ✓ The experience and reliability of an international group on the market for over 50 years
- ✓ Flexible, versatile and innovative production
- ✓ Exclusive production processes and end products *Made in Italy*
- ✓ The TENAX quality management system in compliance with the UNI EN ISO 9001:2008 standard is certified by SGS Italia and SGS UK.
- ✓ Advanced, automated logistics and stock availability all year
- ✓ Wide range of constantly updated products
- ✓ Attention and care to packaging and display
- ✓ Constantly updated website full of information
- ✓ Capillary network of collaborators

*"Plastic is the material  
that Nature forgot to invent"*

*Paul John Flory*  
(Nobel prize for chemistry 1974)

NEW 2015

## New products for home and garden

### ECOLOGY

TENAX's philosophy has always been centred around the need to pay attention to the ecological and environmental sustainability of its products. For this reason, all TENAX products are 100% recyclable. As of this year, with **ECOQUADRA**, TENAX's most famous fencing, **QUADRA 10** goes green, applying plastic obtained from polymers which have been produced 100% from used customer packaging (plastic containers). This product is able to reach target buyers who are particularly sensitive to environmental issues.

### INNOVATION

TENAX uses only the finest polymers, made even more resistant thanks to innovative processes such as molecular orientation. This allows the company to produce highly effective nets such as the new **MILLENNIUM**, plastic residential fencing. Another example of TENAX's innovative spirit is **MISSISSIPPI**, the plastic screen, which, thanks to its "side swing" technology, is able to filter wind, and **ALT**, the new, top quality anti-slip underlay made of EVA to keep household rugs in place.

### TRENDY & FASHION

New textures and attractive colours are the main features of many of TENAX's new creations in its 2015 collection. Keeping pace with the latest trends, these products are a perfect match for modern buildings. These design and decorative objects, like the new **TEXTSTYLE**, give a touch of style and go beyond the mere functionality aspect, attracting target customers who are particularly sensitive to a building's aesthetic impact.

## BOUNDARIES

### Plastic protection

See CODES LIST page II

TENAX protective plastic meshes provide a simple, versatile and colourful solution for a wide range of uses. Depending on the size and the colour of the mesh, they can be used as protection on balconies, railings and air vents, as a windbreak or to screen items from view. They are easy to shape and install and are made from recyclable, non-toxic, high quality materials, and so are child-friendly products.

**eco QUADRA**  
The eco-multipurpose net

RECYCLED

DURATION

UV RESISTANT

The traditional QUADRA 10 mesh net goes ECO! Now this mesh net is produced from 100% recycled plastic for low environmental impact. Ideal as additional protection on fences and gates, finished off with smooth edges on both sides.

- ✓ Made from 100% recycled plastic
- ✓ No fresh raw material waste, all material used in production was no longer useable for other applications
- ✓ With reinforced edges
- ✓ UV resistant

## QUADRA 10

### Multi-use protective mesh

BEST SELLER

DURATION

UV RESISTANT

REINFORCED

The most sold and used mesh, in a vast range of shapes and colours, to match any fencing or gate. Also perfect on balconies because its finished edges means no sharp sides. At 0.5 m high, it can also be used to protect young plants.

- ✓ With a selvage finish and no sharp sides
- ✓ Roll to cut with metre tape measure
- ✓ Available in many colours, together with TENAX classic green

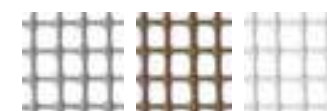

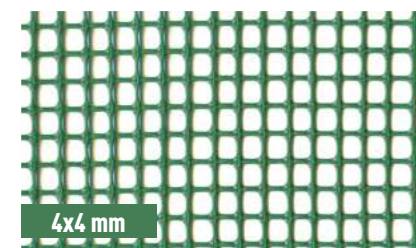

## QUADRA 10

### 1x3 m Brown

#### PROTECTS POTTED PLANTS AGAINST CATS

Plastic, square shaped mesh. Easily shaped to the pot measurement, cut to match the plant size. It stops cats digging and does not harm their paws.

## CUADRADA

Decorative protection

### CUADRADA 05

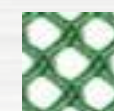

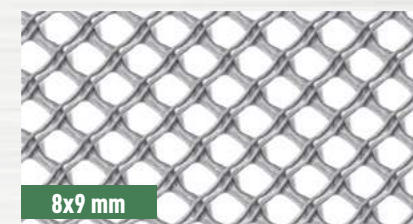

Square mesh nets made up of overlapping filaments which create a very different aesthetic effect. These do not have reinforcements along the edges, and so can be cut to the user's needs and installed easily.

### CUADRADA 10

A mesh net 10mm in width, the most popular and widely-used. Suitable for use on balconies, on railings and on fences.

### CUADRADA 20

With its larger squares, Cuadrada 20 can also be used in the garden. This provides additional protection to existing fences.

## AIRY

The decorative net for  
protection against wind

With a small rounded mesh, Airy has been designed to provide a decorative wind screen on balconies, patios and terraces.

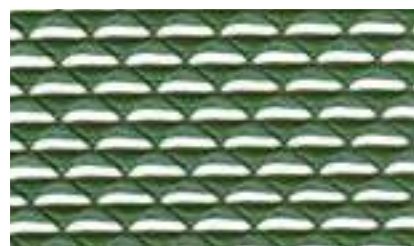

## MISTRAL

The plastic wind breaking  
screen

This product has been specially designed to incorporate two different rectangular meshes, thus creating a tight pattern that keeps out strong winds.

## TRIPLET

Triple-twisted mesh

A highly decorative plastic net with an original structure, made up of three filaments of different shapes and sizes. Resistant and providing standard screening cover, it is ideal for those who want to mitigate the effect of wind on balconies and terraces.

## BOUNDARIES

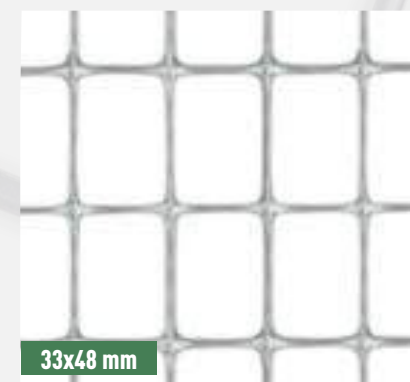

### Plastic fences

See CODES LIST page VI

The TENAX boundary meshes in polypropylene undergo a special process of molecular orientation of the wires in two directions to further resist tearing, pullout and tensile strength. The TENAX PP bioriented meshes offer considerable advantages over metal meshes: easy installation, lightweight to transport, unchanged by atmospheric agents, making it perfect for permanent boundaries. MILLENNIUM and RANCH, with more resistant wires, are recommended for permanent residential boundaries; while CINTOFLEX and AVIARY, which are lighter and cheaper, are ideal to create aviaries and fence in small animals.

**NEW 2015**

#### AWARDS

TENAX MILLENNIUM was successfully presented at the **JDC, Journées des Collections Jardin 2014**, in the Trend Space, dedicated to Innovations in the Gardening sector, **winning first prize**.

**MILLENNIUM**  
As resistant as metal

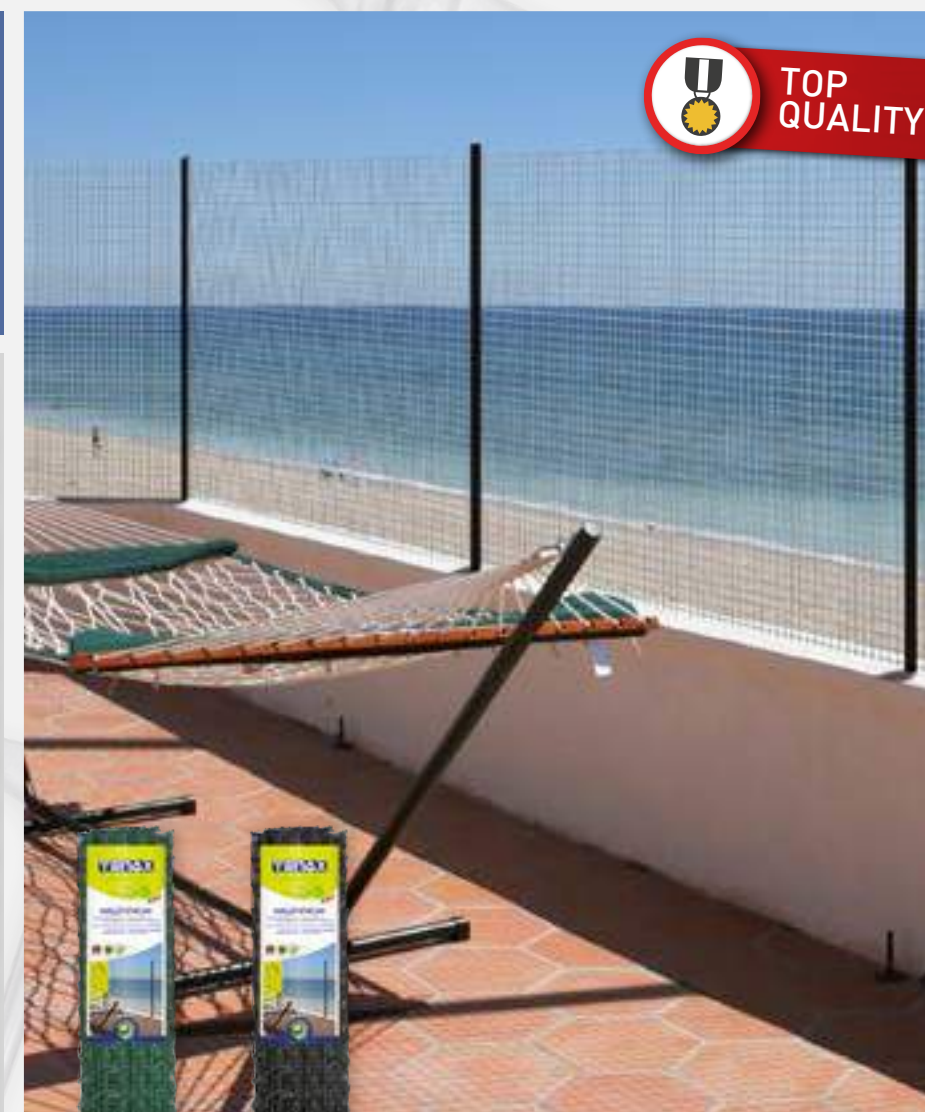

A fencing mesh which is similar to metal both in its appearance and because of its very high level of traction, tear and break resistance. It's ideal as permanent fencing for houses, especially in seaside areas, because it is not affected by saline corrosion. The mesh rolls are light and easy to move around.

- ✓ The first plastic mesh net with a metal-like resistance and appearance
- ✓ Ideal for permanent fencing
- ✓ Perfect for seaside areas as it is resistant to sea and air corrosion
- ✓ Does not rust, resistant to any weather condition

### FENCES SPACE SPECIFICALLY FOR YOUR DOG

Very high strength and long lasting plastic mesh, ideal to fence off areas specifically for medium-small sized dogs.

# CORRECT INSTALLATION OF TENAX PERMANENT FENCING

USE TENAX ORIGINAL ACCESSORIES

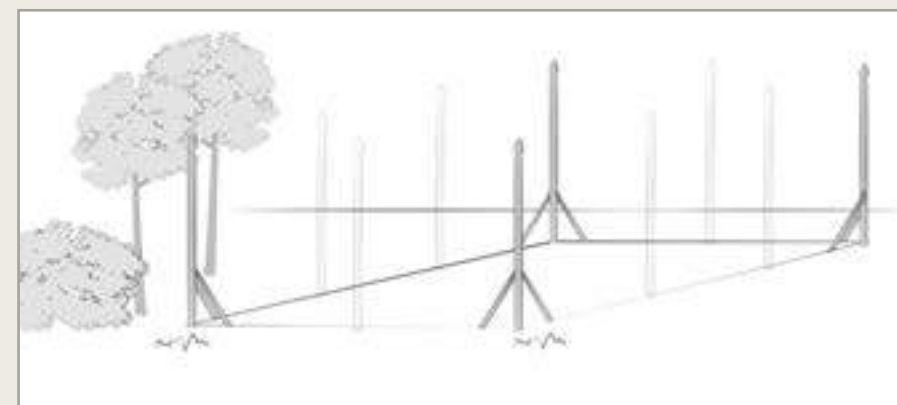

## Define the number of poles to use

Measure and trace the perimeter to fence, defining the number of poles necessary, considering a pole approximately every 2 m and arrows on the corners.

## Outline the area to fence

Position the pickets along the perimeter and hang a guide wire to use to position the perfectly aligned poles.

## Position the TENAX EXTRA ARROWS for reinforcement

You are advised to install the poles on the arrows, using two TENAX EXTRA ARROWS for bracing for greater stability and strength.

## Install the TENAX EXTRA T-POSTS

Then install the poles along the entire perimeter to fence, positioning them approximately 2 m from one another. The poles can be positioned in cement or directly in the ground.

## Installing poles in cement

Make holes in the ground, with the pole or machinery such as bores or mini-excavators, approximately 20-30 cm deep for a width of 20-30 cm; pour cement in the hole and position the poles until you touch the bottom, checking they are perfectly perpendicular to the ground and aligned with the previously hung twine. Wait until the cement is completely dry before installing the fence, to avoid misaligning the poles when installing the mesh.

**Note:** The height of the pole should be at least 1 cm over the mesh. The height of the poles to install with cement should therefore be calculated as follows:

**h fence + 20/30 cm to install with cement + 1/2 cm for the pole over the mesh**

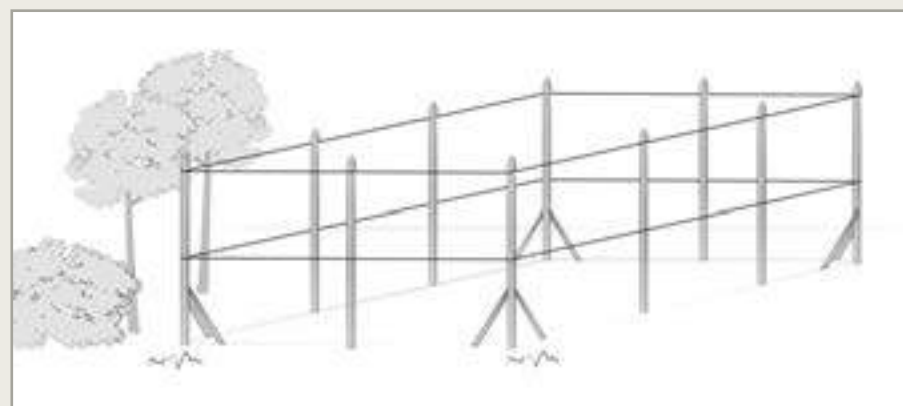

## Installing poles in the ground

Make holes in the ground that are approximately 50 cm deep. Place the poles in the ground, cover with the dug earth and compact.

**Note:** The height of the pole should be at least 1 cm over the mesh. The height of the poles to install with cement should therefore be calculated as follows:

**h fence + 50 cm underground + 1/2 cm for the pole over the mesh**

## Installing plastic coated metal wires

Having positioned the poles, strengthen the fence by pulling the metal, plastic coated TENAX EXTRA WIRE through the holes of each stake and fasten the relevant TENAX WIRE TENSIONERS. You are advised to position a plastic coated metal wire every 50 cm high. Position the wire tensioners at a distance of approximately 15 cm from the pole and corresponding to each wire positioned. Pass some wire in the specific wire tensioner mechanism. With the help of a pincer or a wrench, tighten the plastic coated wires.

## Installing the mesh

Unroll the mesh along the poles positioned and fasten the mesh to the wires and the relevant poles with the help of the metal, plastic coated TENAX EXTRA WIRE or the specific plastic TIES. Initially unroll the entire mesh and fasten it temporarily to the poles. Later, you can tighten and refine it.

## CINTOFLEX

Flexible but strong

### CINTOFLEX M

A mesh which, thanks to the particular production process, is light and flexible but very resistant to tearing. It is mainly used to build small bird and parrot cages and chicken runs.

### CINTOFLEX D

The wider mesh can successfully be applied to create fences for small domestic and courtyard animals.

### CINTOFLEX E

With its smaller mesh, can be used to create aviaries for small birds and for many other applications. It is mainly used to build chicken runs.

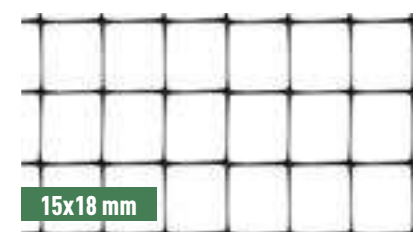

### CINTOFLEX C

With its larger mesh it is perfect for enclosing and protecting pitches, courts and playing fields.

**CINTOFLEX M**  
1x10 m Black

**MESH FOR AVIARIES**  
Resistant plastic, light and flexible mesh; ideal for building aviaries for birds and parrots.

**CINTOFLEX M**  
Mesh for aviaries

## AVIARY

Specifically for horizontal use

An intermediate plastic grid mesh that is light and flexible, specifically for horizontal use in many applications, to close cages and chicken runs (to prevent intrusion of other birds or farmed birds escaping) to covering garden ponds, to protect them from leaves in the autumn. It is also advised as an anti-mole protection (see page 92)

Staples - 100 pz ■

Position the TENAX EXTRA T POSTS along the perimeter of the chicken run. Strengthen the fence, pulling the metal wire through the holes on each pole. Unroll the plastic TENAX CINTOFLEX mesh along the poles positioned and fasten them with the metal wire or TENAX ties. On wooden structures, the mesh can be fastened using the TENAX staples. To prevent intrusion of other birds and to avoid other farmed birds escaping, you are advised to close the top of the chicken run, covering it with TENAX AVIARY plastic mesh, positioned horizontally.

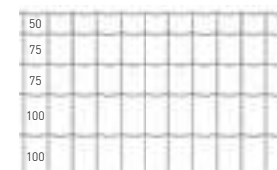

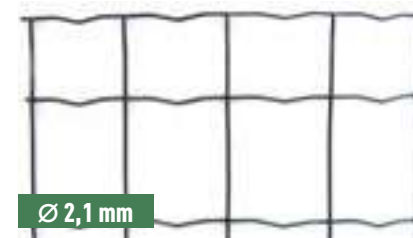

## BOUNDARIES

### Wire meshes

See CODES LIST page IX

TENAX metal fences range from protective and decorative fences for the garden, to the more traditional wire nets for the construction of cages, hen-pens and small enclosures in courtyards. Made of iron or steel, the thread will be coated with plastic for the most decorative products, galvanized for rigid and strong meshes, or worked in triple torsion when greater flexibility is required.

## Flexible lawn edging

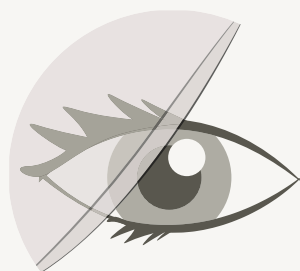

Made from corrugated plastic and available in three sizes, this lawn edging is UV stabilized, cost effective and flexible. Ideally suited to curved borders, flowerbeds and lawns.

## SCREENING

### Woven nets

See CODES LIST page XI

The polyethylene mesh is widely used in gardens or terraces installed vertically such as screening or shielding against wind, or in courtyards and vegetable plots, hung horizontally to protect outdoor areas and vehicles against sunlight. The new and most trendy colours and highly decorative content such as the new TEXTYLE textile screen, permits stylish decoration even in the most modern buildings.

## SOLEADO

The market leader

Produced with first choice and uniform weave, it does not twist and is perfectly flat. It is treated to resist UV rays and keeps its colour over time. It is mainly used as a screen on fences but is also indicated for horizontal use for shading.

## SOLEADO PRO

REINFORCED

SOLEADO PRO is a very robust and highly screening woven net. It has edges which allow it to be fit onto fences, therefore avoiding tearing. This is a high quality product, suitable also for use as horizontal shading, to protect crops or open-air playing areas.

## SOLEADO HG

NICE PRICE

The new SOLEADO is a traditional thick and run-resistant net, which is ideal both for screening and shading. This product is now available at an even more competitive price.

# WOVEN NETS

## Installation and accessories

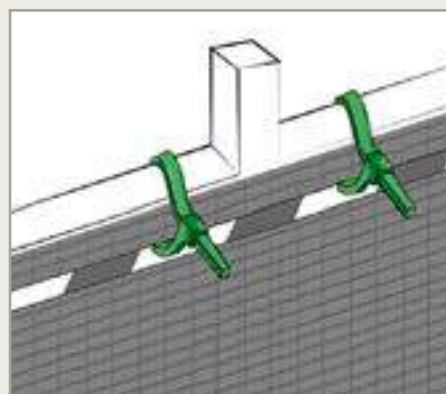

USE TENAX ORIGINAL ACCESSORIES

### VERTICAL INSTALLATIONS

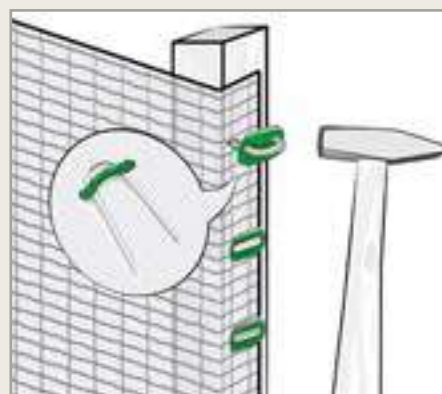

**TENAX WOVEN NETS** are ideal to screen gardens and private areas from view

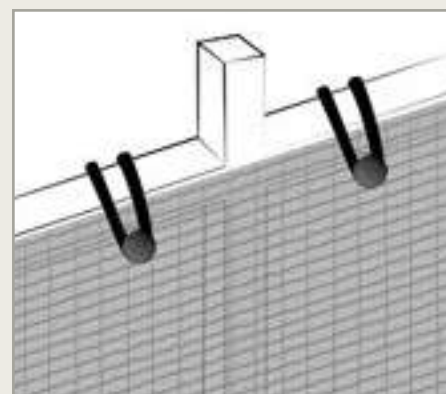

They can be easily fastened to fences thanks to TENAX CLIPS available in green or black to easily match the various screens.

For WOVEN NETS with eyelets (TENAX COIMBRA) you are advised to use the plastic TIES, available in various colours and measurements.

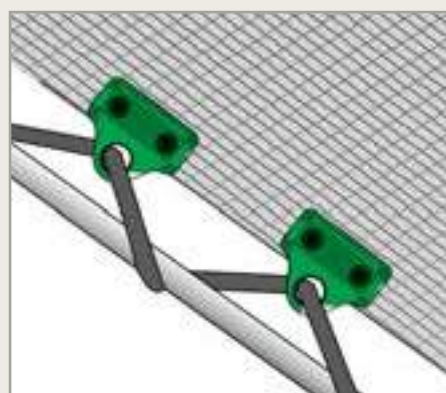

On wooden fences, the screening meshes are fixed using TENAX STAPLES accessories.

To install TENAX TEXTSTYLE, you are advised to use the ELASTIC TIE accessory. Put the tie through the eye hole. If necessary, wrap the tie around the fixed ball at the end as many times as is required.

### HORIZONTAL INSTALLATIONS

TENAX screening meshes can be installed horizontally to create pleasant and permanent shaded areas for outdoors, or temporary areas for campsites.

## DIVY PUZZLE

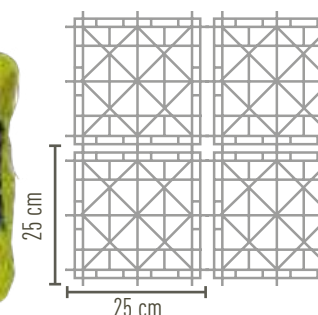

### New trend vertical green

Vertical greenery is becoming an important decorative element capable of creating suggestive walls and transforming any environment into an oasis of wellbeing and relaxation. In this context, the new TENAX DIVY PUZZLE hedge, in modules to compose as you wish for maximum flexibility, is highly decorative and a likeness that creates an amazing effect. Available with 5 leaf types, it is ideal to decorate walls, enhance areas or as a simple design element indoors. It is however also perfect to conceal objects, parts of terraces or walls, creating sophisticated and captivating scenery with a huge aesthetic impact.

- ✓ Incredible likeness and maximum composition flexibility
- ✓ Wide range of leaves (undergrowth, ivy, red maple, cypress, boxwood)
- ✓ Ideal for outdoors and indoors, small or large areas
- ✓ No maintenance required. They can be washed with water
- ✓ Long lasting and easy to install

## EXTERNAL PAVING

## Synthetic lawns

See CODES LIST page XVIII

TENAX synthetic lawns will always stay perfectly green and luxuriant, without requiring its owner to mow, weed or water. A variety of types, are available suitable for indoor or outdoor use, from decorating the edges of swimming pools, sprucing up or restoring a terrace or porch, to provide a solution for difficult areas of the garden to maintain. All made of plastic blades which are stitched onto a draining support, they are washable with water, do not need particular maintenance, and can be installed following simple instructions. They do not attract insects or mosquitos or provoke any allergies.

# SYNTHETIC LAWNS

## The reasons for choosing them

### NEAT AND TIDY ALWAYS, EVERYWHERE

Leisure time spent mowing, weeding and watering the lawn is a thing of the past: TENAX synthetic lawns require no maintenance, they do not attract insects and mosquitoes and do not cause allergies. They always look well groomed and welcoming, an even colour with no weeds.

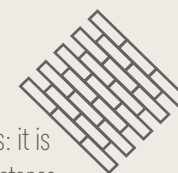

### HARD-WEARING WHATEVER THE SEASON

Beautiful in every season, they keep their appearance for many years thanks to the top quality materials used and the UV resistant treatment. Simply use a yard brush, rake or blower to remove dust and dirt. Use water and neutral detergent to clean them.

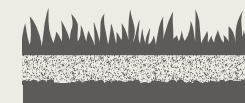

### LAYING

Easy to lay on paving and tiles: it is recommended to request assistance from experts when laying the turf on grass lawns and uneven surfaces. Use the TENAX accessory kit to achieve absolutely perfect laying results.

### NO MORE WASTED WATER

They reduce water consumption: if a grass lawn requires an average of 4 litres/m<sup>3</sup>/day, synthetic lawns just require a sprinkle to freshen them in really hot weather, generating remarkable savings on utility bills. Their water drainage system is also much better than on grass lawns.

### IMPROVEMENT WITH SAND INFILLS

Sand has a positive effect on synthetic lawns: the tufts remain upright, the appearance improves, the turf lasts longer, it retains humidity better and is resistant to overheating. But use of sand is not mandatory.

## THE ANSWERS TO ALL YOUR QUERIES

### IF A CIGARETTE OR HOT CINDERS FALL ON IT, IT DOES NOT CATCH FIRE

It is however recommended to avoid contact with incandescent materials: they can damage the yarn filaments.

### IF PETS DIRTY THE TURF, THEY ARE EXTREMELY SIMPLE TO CLEAN

Cats and dogs love synthetic lawns: simply wash them with water and neutral detergent when soiled by pets.

### IF WEEDS APPEAR, THEY KNOW HOW TO DEFEND THEMSELVES

Accurate preparation of the base before laying the turf will ensure this problem does not arise. If they do happen to appear, simply remove them by hand.

### WHEN IT RAINS THEY DO NOT ROT

The turf base is perforated: water simply drains out and does not accumulate. A slight slope helps the drainage system.

### IF THEY GET HOT IN THE SUN, SIMPLY REFRESH THEM

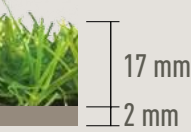

Spray the turf frequently to prevent overheating. In such case, refrain from brushing it and prevent excessive use.

# PREPARATION OF THE SUBSTRATE

## Preparation for laying on soil

**1.** Remove all existing vegetation using selective weed killers and hoe the soil to remove roots and earth clods.

**2.** Use a lawn roller to obtain a level and compact support surface.

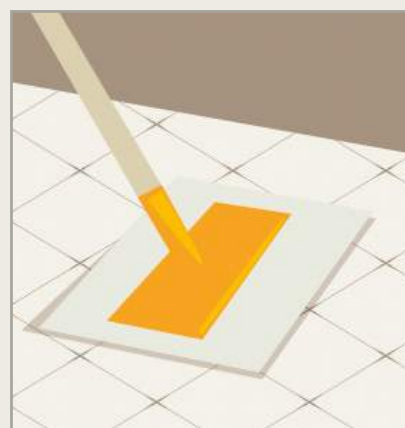

**3.** Unroll a permeable weed protection sheet (TENAX FULL COVER) that acts as a separation layer. Overlap them by about 5 cm and anchor the sheet to the ground where necessary.

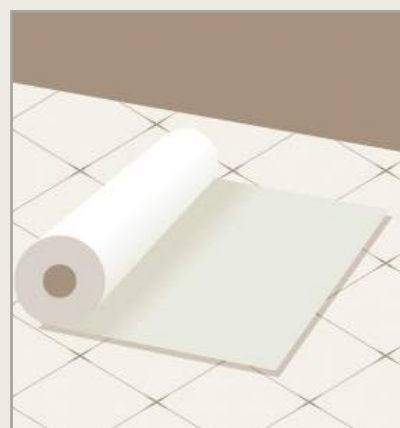

**4.** In particular situations, where it is necessary to achieve perfect drainage of water, cover the weed protection sheet with a layer of gravel or other drainage element. (TENAX DR1 or TENAX DR2 )

# PREPARATION OF THE SUBSTRATE

## Preparation for laying on paving

**1.** Clean the surface to be covered.

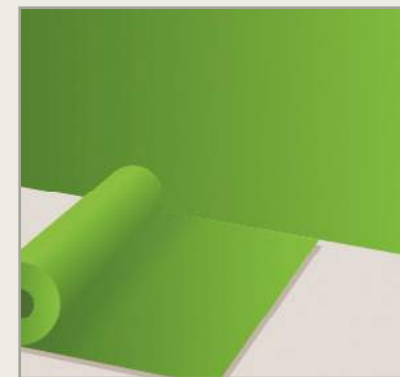

**2.** If the paving is waterproof, (tiles, marble slabs) lay a sheet of non-woven fabric (for eg. TENAX TS1\*) or drainage element (for eg. TENAX TNT 600E\*) to allow the water to drain away.

\* The choice of drainage composite must be made while taking into consideration the slope of the terrace, the type of grass and exposure to atmospheric agents.

# LAYING THE TURF

## Large surfaces

**1.** Unroll the synthetic lawn and lay it so that the whole surface is covered; try to limit the amount of cutting and seaming necessary.

**2. Laying on paving**  
Use TENAX MAT DUO\* type double-sided adhesive tape to obtain edge anchoring.  
\*This procedure is only applicable when strictly necessary (highly-frequented areas, windy areas). This solution could leave marks or residue on the paving when the turf is removed at a later date.

**Laying on soil**  
Proceed with the edge anchoring using flat head nails every 50 cm.

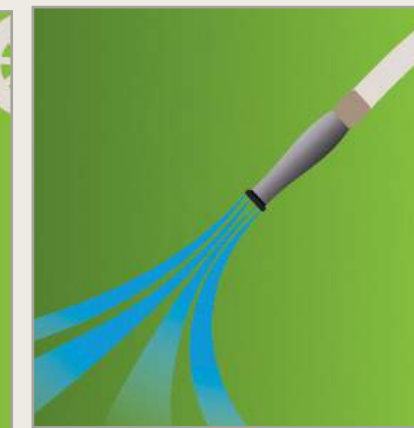

**3.** To splice two rolls, lay the sheets making sure that the filaments are facing in the same direction and perfectly aligned. Turn up both edges and apply some TENAX MAT SEAL adhesive tape (or a strip of MAT STRIPE non-woven fabric combined with a layer of polyurethane adhesive). Now flatten out the edges.

**4.** Wait 24 hours until dry and then, where necessary, apply a sand infill (check the product technical sheet) using a stiff bristle yard brush to push the sand deep into the base.

# MAINTENANCE

## Synthetic lawns

Use a stiff bristle yard brush or a blower, at due distance from the filament tufts, to remove leaves and other residue. Use water and non-abrasive neutral detergents to wash synthetic lawns. To keep the turf looking lush and the filaments in good condition, it is important to maintain the sand infill over time. Check the level of sand every six months and top up as necessary.

## EXTERNAL PAVING

## Lawn reinforcement

See CODES LIST page XX

To support and protect the turf in case of frequent trampling or access to vehicles and garden machinery, TENAX offers two options which insure optimal results for everyone. Due to their strong structure, they have proven to be exceptionally durable and effective, despite their low weight and limited thickness.

**PROTECTS THE LAWN WITHOUT HURTING  
YOUR DOG**

Plastic rhomboid shaped mesh, protects the lawn by stopping dogs digging holes and doesn't hurt your dog's nails. It is easily laid using TENAX U staples.

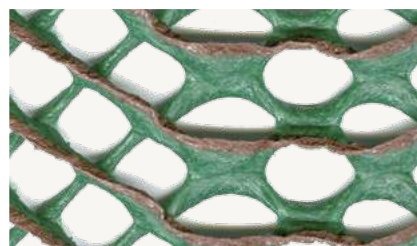

EXTERNAL PAVING

Lawn reinforcement

## GP FLEX

Lawn protective grid

This grid has proven to be one of the most robust and reliable solutions for protecting grassed areas from pedestrian and vehicle damage. Thanks to a unique method of extrusion, it features a slip resistant surface. Being thick but relatively flexible, it is quick and easy to install and will reinforce and protect the ground from rutting.

- ✓ Protects the lawn and increases vehicle grip
- ✓ Reduces drill formation
- ✓ Optimum aesthetic impact
- ✓ Fast laying, even over large surfaces
- ✓ Re-usable

### SHAPES AND COLOURS AVAILABLE

See CODES LIST page XX

#### Roll

- 1x10 m
- 2x20 m

## U STAPLES

GP FLEX

### SHAPES AVAILABLE

See CODES LIST page XXXV

h. 30 cm

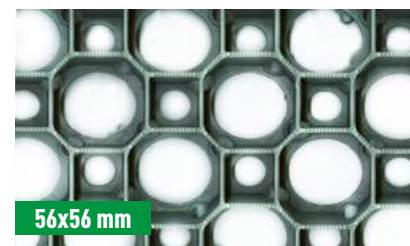

## Installation

### OVER EXISTING TURF

Cut the lawn short and roll out GP FLEX. Fix the mesh to the ground by using "U" rivets.

### NO EXISTING TURF

Overturn the soil and clear it of impurities, then compress it to strengthen. Roll GP FLEX out on the ground and fix the mesh to the ground by using "U" staples. Sow seeds and cover with at least 2 cm of cultivation soil. Water the soil frequently and abundantly.

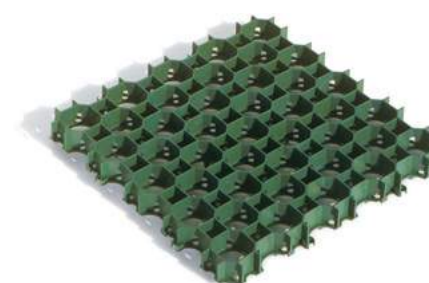

## PRATOBLOCK

Reinforced lawn

Heavy and rigid modular grids made from HDPE, 40 mm thick, they can be easily interlocked to construct outdoor flooring and pathways. Non-toxic, draining and resistant to compression, they become invisible as soon as grass grows.

- ✓ Modular panels, with groove and tongue joints, for quicker installation
- ✓ Soil hooks, to guarantee stability even on slopes
- ✓ UV stabilized and chemical resistant for long lasting results
- ✓ Panels can be put one on top of the other, for easy handling and stocking even in outdoor environments.

### SHAPES AND COLOURS AVAILABLE

See CODES LIST page XX

#### Panel

0,5x0,5 m

## Installation

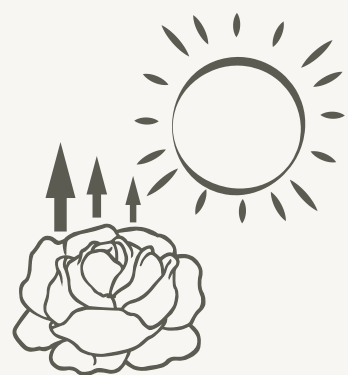

- Lay a non-woven fabric on the compacted soil.
- Place a further layer of mixed sand and soil, then compact it all together.
- Put PRATOBLOCK in place, linking the modular grids together.
- Fill the grid meshes with soil and irrigate abundantly.
- Finally sow the lawn and spread fertilizer on it.

## VEGETABLE GARDEN AND PLANTS CARE - *SPRING / SUMMER*

### Early growth

See CODES LIST page XXI

When spring comes around, it's important to pay a great deal of attention to your plants: the first seeds and fruits should be protected from the sudden changes in climate, as well as from wind and frost. TENAX's range of plastic films and fleeces not only guarantees crop protection, but also supports and fosters crop development, creating a microclimate which encourages growth and bring harvesting ever closer.

## Mr TOMATO

Designed for tomatoes

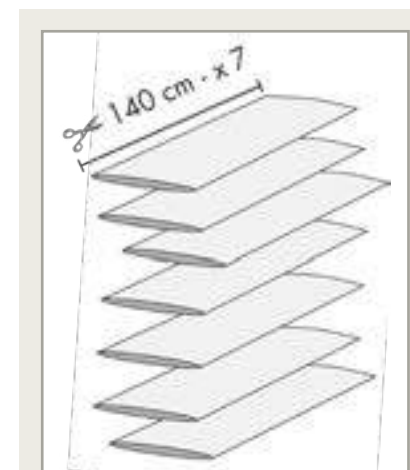

Yellow, tube-shaped film which can be slipped over tomatoes plants in order to foster and accelerate growth. Its yellow hue attracts the sun's rays and concentrates them on smaller fruits which then ripen more quickly and more healthily. The film has been perforated to allow enough air to enter.

- ✓ Increases plant yield and accelerates harvesting
- ✓ Protects from sudden changes in temperature
- ✓ Shelters from heavy rain and hail
- ✓ Shields from bird attacks

### To correctly install the product, we suggest:

- ✓ The product be used from April to September
- ✓ Cutting the tube to 140 cm (approx.) in height
- ✓ Sliding the tube over already developed tomato plants
- ✓ Closing the tube on the top half only, using the fastening ropes
- ✓ Removing the protection once the plant has stopped producing fruit

Semi-circumference 1 m

## VEGETABLE GARDEN AND PLANTS CARE - *SPRING / SUMMER*

### Weed control

See CODES LIST page XXII

Mulching is an agricultural practice, also used today on gardens and crops, to mechanically prevent weed growth, without using chemical herbicides. TENAX proposes a range of films, covers and non-woven fabrics which, laid around the crops, maintain the humidity of the ground but stop light filtering, thereby depriving the weed seeds of the chance to develop. For non-woven fabric, coverage with bark or gravel is necessary to avoid their decay due to sun exposure.

# MULCHING

## Protects and intensifies production

### WHAT IS IT?

In nature, a tree produces leaves that fall in autumn and deposit at the base of the trunk. This simple process reduces cultivation intervention by man, protects the plant, hinders weed growth, keeps the soil humid at a constant temperature and prevents the beating action of the rain compacting it. **MULCHING is a farming technique used on crops and in gardens to copy this process, by covering the ground at the base of the plants with organic and inorganic matter.**

### WHAT MATERIALS?

The following can be used: organic matter (leaves, bark, turf, etc.) or natural inorganic matter (lapillus, gravel) or synthetic material (**covers, film or non-woven fabrics** in PE, PP or PET). The organic matter has the disadvantage of decaying over time, while the natural, inorganic matter is difficult to lay and remove. Instead, synthetic covers, fabrics and films are light, easy to manage, very practical to install or remove and inexpensive.

### WHAT'S IT FOR?

- ✓ It stops weed development
- ✓ It keeps the humidity level constant and reduces irrigation frequency
- ✓ It reduces sudden changes in temperature
- ✓ It protects the ground from rain erosion
- ✓ It encourages root growth and the resulting wellbeing of the plant
- ✓ It helps fruit and vegetables stay clean
- ✓ It promotes fertile soil and the growth of young plants

## GREEN COVER

Professional cover

A very dense woven fabric, it arrests weed development and preserves the quality and cleanness of crops, reducing the need for maintenance at the same time. Its particularly resistant structure makes it ideal on small slopes, where it helps to stop the soil from being washed away.

The product deteriorates if in contact with pesticides or weed killers with a high sulphur concentration (80%)

**NEW COLOUR 2015**

## GREEN COVER is now also in WHITE

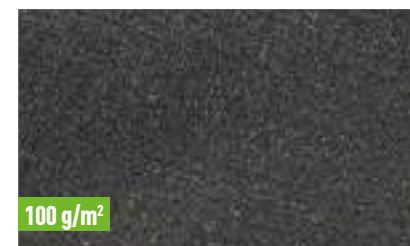

WITH A REFLECTIVE FUNCTION, SPECIFICALLY FOR ORCHARDS AND OVERGROUND PLANTS

Laid on the ground among the orchard rows, it reflects sunlight and forces ripening of the fruit growing on the lower branches of the plant. Usually shaded by the higher foliage, the fruit on the lower branches colour and ripen in a natural and more homogenous way, thanks to the WHITE GREEN COVER. Harvesting is therefore early with time optimisation because the top and bottom of the plant can be harvested simultaneously, with visibly more satisfactory results.

- ✓ THE FRUIT ON THE LOWER BRANCHES HOMOGENEously RIPENS
- ✓ FRUIT HARVESTING IS EARLY AND OPTIMISED

- ✓ THE COVER IS RESISTANT AND TREADABLE
- ✓ LASTS OVER TIME, IT CAN BE RE-USED
- ✓ PRACTICAL AND EASY TO LAY, IT CAN BE MOVED QUICKLY AMONG THE ROWS

**SHAPES AND COLOURS AVAILABLE**

ACCESSORY

## HYGROMETER

Measures humidity in the air

SHAPES AND COLOURS AVAILABLE  
See CODES LIST page XXXVIII

Hygrometer ☒

## WHAT IS pH?

pH is a measurement scale of the acid and base properties of a solution or an element. Each plant requires optimal pH for healthy and rigorous growth.

## THE IDEAL GROUND FOR STRAWBERRIES

To grow strawberries, the ground must be sub-acid and rich in organic substances. It needs moderate but constant quantities of water during the entire cultivation cycle. To increase production, eliminate any adverse conditions and facilitate harvesting using an impermeable mulch.

OPTIMAL pH\*: 5,0-7,5  
OPTIMAL HUMIDITY\*: 2-3

## MEMORANDUM FOR PERFECT TOMATOES

Tomatoes love light, therefore choose a well-lit position and use the specific film (such as TENAX SUN FILM and TENAX Mr TOMATO). These plants are climbers, therefore they require supports and specific accessories. They need moderate but constant quantities of water during their entire cycle.

OPTIMAL pH\*: 6,5-7,5  
OPTIMAL HUMIDITY\*: 4

## VEGETABLE GARDEN AND PLANTS CARE - *SPRING / SUMMER*

### Plant supports

# HORTONOVA

## Mesh for climbers

VEGETABLES

UV RESISTANT

NICE PRICE

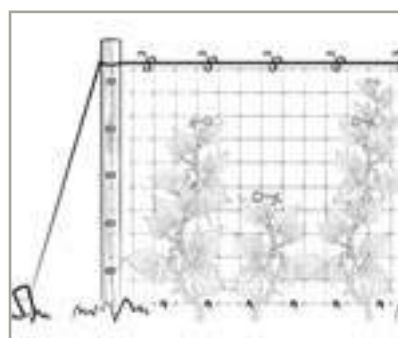

EASY TO INSTALL

TENAX HORTONOVA is the plastic mesh that has revolutionised the cut flower and climber vegetables cultivation system. In prime quality polypropylene, it has an exclusive extrusion and bi-stretching process that ensures its excellent strength and that it lasts over time.

It is suitable for all different cultivation techniques. It replaces metal mesh and iron trellises or perishable materials such as bamboo reeds or wood, traditionally used to create support and separate frames. Using TENAX HORTONOVA as a vertical support ensures excellent aeration, ideal exposure to sun and improves use of spaces, both for cultivation and harvesting.

- ✓ It improves plant exposure to air and sun
- ✓ Light yet very resistant, it is easy to install and move
- ✓ UV resistant
- ✓ Resists bacteria, chemical agents and mould
- ✓ Does not rust

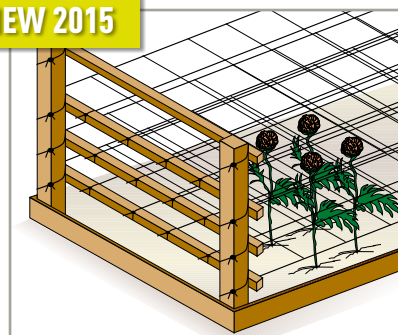

## Vertical installation FOR HORTICULTURE (measurements over 1 m)

The mesh is stretched vertically, fastening it to the poles placed along the cultivated row, based on the preferred techniques. Slightly raised off the ground, it must enable the vegetable plant to develop so the vegetable can climb along the mesh, going in and out. By doing so, the plant develops upright and the weight is supported. It gives a better qualitative and quantitative yield, and fast harvesting. The perfect passage of air and light guarantees the plant and fruit develop in the best way possible. It is ideal to grow peas, beans, tomatoes, cucumbers and all climbing vegetables. The white colour allows the plant to be easily identified.

## Horizontal installation FOR FLORICULTURE (measurements under 1 m)

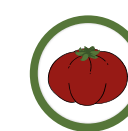

## NEW 2015

The mesh is stretched horizontally, fastening it to poles arranged transversely on the ends and intermediate poles positioned along the sides of the plot, based on the type of cultivation. During flower growth, continue to horizontally lay HORTONOVA mesh to create layers. This allows the flower to grow straight and therefore gain added value on the sales market.

# STAND UP

## Conventional stake for vegetables

VEGETABLES

NICE PRICE

RECYCLED

EASY TO INSTALL

Plastic stake made from recycled polymer, hollow inside, finished in tree bark which helps plants to climb. Ideal for your orchard, they are available in different heights and diameters.

## VEGETABLE GARDEN AND PLANTS CARE - *SPRING / SUMMER*

### Protection from hailstones, birds, small animals and moles

See CODES LIST page XXVII

Thanks to the experience gained in the agricultural sector, TENAX developed a line of efficient protections, which, due to their easy use, can also be used in gardening and vegetable plots. Installed on support structures or laid directly on plants, the hail-proof and bird-proof meshes offer a practical and convenient solution to safeguard the harvest, without prejudicing development in any way. The range of TENAX protective meshes is extended with the mole-proof mesh, to protect plants down to the roots and the square-shaped, plastic mesh to protect young plants from rodents, small animals and brush cutters.

## THE RIGHT PROTECTION AGAINST EVERY THREAT

HAIL

### PROTECTION AGAINST HAILSTONES

Complete range of meshes to protect plants and fruit.

DEFENDER PLUS

DEFENDER

UTILFENDER

BIRDS

### PROTECTION AGAINST BIRDS

Lightweight, elastic mesh ideal to protect fruit trees from birds.

ORTOFLEX

ORTOFLEX BIS

ANIMALS

### PROTECTION FROM SMALL ANIMALS

Square-shaped mesh to protect plants from rodents, small animals and brush cutters.

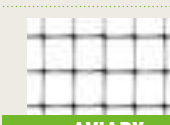

QUADRA 10

MOLES

### PROTECTION AGAINST MOLES

Plastic mesh to place underground to protect plant roots.

AVIARY

TENAX meshes to protect against birds, moles and small rodents are harmless to these animals but allow plants to grow and fruit to develop without being damaged.

## PROTECTION AGAINST HAILSTONES

### The effects of hailstones are not confined to the fruit!

Hailstones can have devastating effects on crops and fruit trees, since the micro abrasions caused by the drops of ice are like small, wide open doors for bacterial or fungal diseases. As days go by, not only are the fruit and flowers beyond repair, but the plant itself is at serious risk of dying.

### What can be done to protect plants?

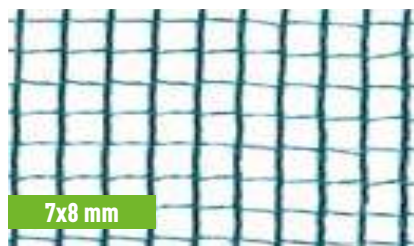

Modern research in the agro-technical field has involved considerable investments into the most efficient protection against the "risk of hailstones". The hailstone-proof meshes are an ideal tool to solve this problem: **they prevent the most persistent and violent hailstones from damaging shoots and fruit, enabling rigorous growth of plants and, at the same time are easy to use.**

Structurally, they cannot be deformed, offer high tensile strength and resist tearing, however they also improve air and light passage, making TENAX hailstone-proof meshes an "ever-present" solution. The exceptional resistance of the TENAX hailstone-proof mesh is due to the quality of the raw material, the strength of the wire and the thickness that guarantees maximum protection, even against hail storms:

- ✓ they provide an efficient and active defence, capable of resisting stress caused by wind and hail
- ✓ the passage of light and air is not obstructed
- ✓ they reduce the percentage of damaged product in the event of violent storms
- ✓ they are simple and fast to install and are long lasting

## DEFENDER PLUS

Double thread woven netting

Double thread woven netting, for extra strength and longer durability, it is perfect for protecting crops from hail even on wide structures and greenhouses.

\* net dimension, perfectly open. The net not unfolded rolls up getting the shape of a rope.

**ORTOFLEX BIS**  
Expandable bird netting

This extruded diamond mesh is used to prevent birds from pecking at seeds and fruit. The flexible structure makes it ideal for stretching over trees with irregular shapes.

# PROTECTION AGAINST BIRDS

## Installation and accessories

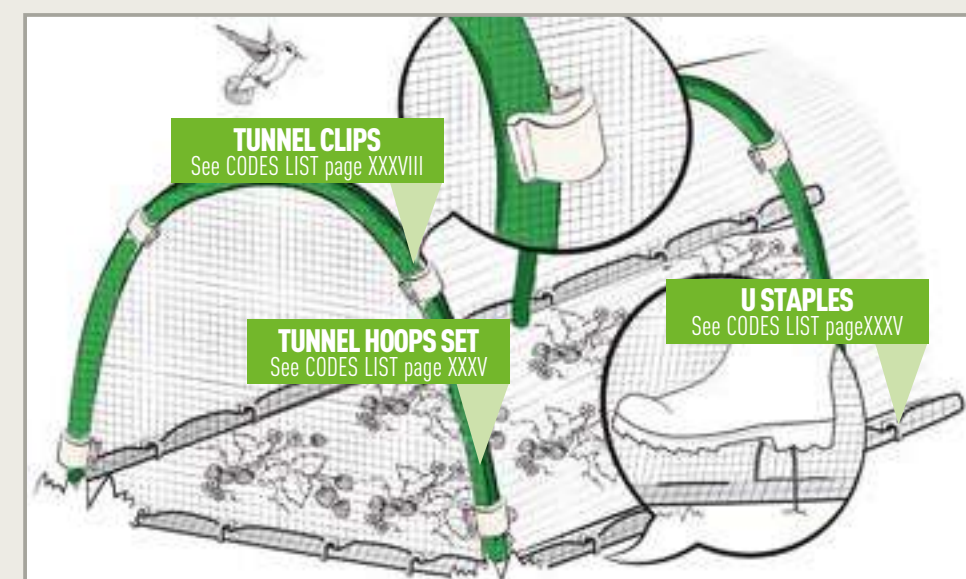

USE TENAX ORIGINAL ACCESSORIES

### CLASSIC INSTALLATIONS

#### Direct use

Lay the mesh directly on the plants or the fruit trees. If necessary, fasten the cover with the specific TENAX TWINE.

#### Installation on a support structure

Create a support structure, positioning the hoops on the ground. Lay the TENAX mesh on the support structure. Fasten the mesh to the hoops with the TUNNEL CLIP and to the ground using the U staples.

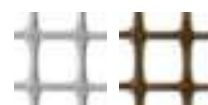

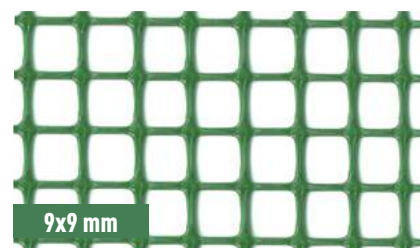

### ALTERNATIVE INSTALLATIONS

The TENAX mesh is very light and simple to lay. It is therefore very efficient, even to protect garden ponds, from falling leaves.

**SHAPES AND COLOURS AVAILABLE**

## AVIARY

Underground mesh for moles

ANTI MOLE

NICE PRICE

VEGETABLES

PLASTIC

The lightweight TENAX AVIARY mesh is easily shaped and very resistant. It is not damaged in contact with the ground and guarantees efficient protection of your crops. It is also indicated for use in horizontal protection (see page 23).

# PROTECTION FROM MOLES

## Installation and accessories

USE TENAX ORIGINAL ACCESSORIES

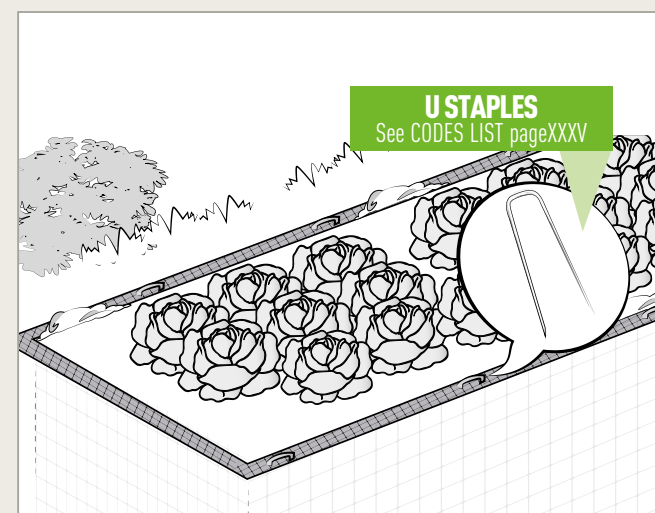

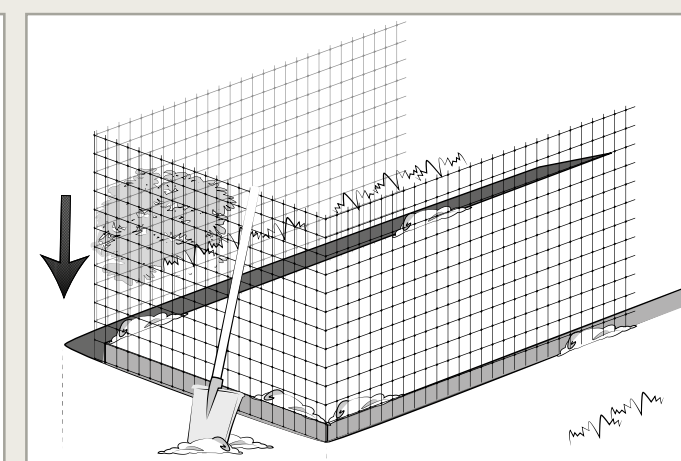

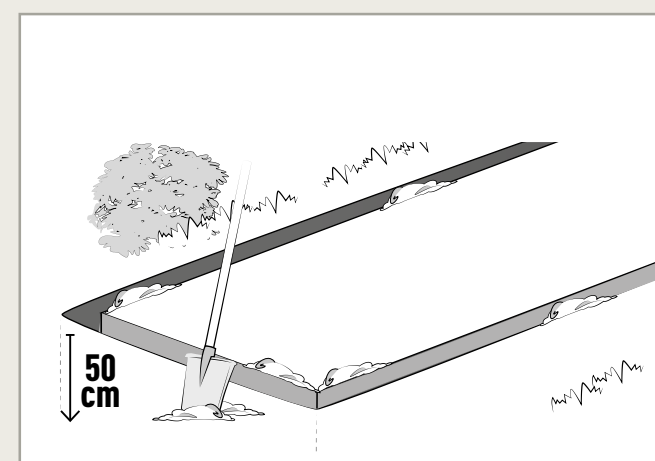

Moles are insectivores that prefer crops and gardens whose soil is humid and soft, because they mainly feed on worms and insect larvae.

Other than this useful disinfestation action, the mole, however, causes considerable damage to the ground due to the tunnels it digs, pulling up crop and vegetable roots.

The mounds of soil on the surface, near the dug earth, also spoil lawns and make maintenance difficult.

### How to stop moles digging the ground?

To prevent moles digging the ground and damaging plant roots, you are advised to place the TENAX AVIARY mesh in PP underground, around the area to protect.

**U STAPLES**  
See CODES LIST pageXXXV

### Laying

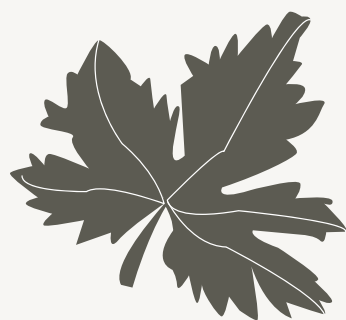

1. Dig the ground around the area to protect, at a depth of approximately 50 cm and at a sufficient width to place the mesh underground.
2. Slide the mesh inside the trench and slightly turn up the edge, folding it on the ground. The absolute flexibility and lightness of the TENAX AVIARY mesh will facilitate these operations.
3. Fasten the flap on the ground with the specific U STAPLES.

## VEGETABLE GARDEN AND PLANTS CARE - *AUTUMN*

### Outdoor maintenance

See CODES LIST page XXIX

There is plenty of work in the garden before winter arrives. TENAX offers a vast range of specific products for outdoor maintenance. Winter covers guarantee outdoor furniture is adequately protected and wood is kept dry and ready for use. Bags make it easier to collect dry leaves and transport them. Lastly, autumn is also the time to harvest olives, almonds and hazelnuts for which TENAX proposes loom woven fabric meshes, which are soft and flexible and at the same time resistant, to facilitate harvesting without damaging fruit.

# AUTUMN HAS ARRIVED

## Some advice for the season:

Autumn is always considered a season of passage where the garden, which in the summer is the undisputed recreational space for all the family, is a bit neglected until next spring. In this season, even though the garden cannot be enjoyed, we can take advantage of this time to take care of it, protect it and best prepare it for next spring to ensure it is more thriving and beautiful than before.

### Some advice for the season:

#### ✓ PROTECT WOOD AND GARDEN FURNITURE

If exposed to rain, cold and frost, even garden furniture in plastic and in wood, needs protecting. TENAX winter covers guarantee furniture is adequately protected and facilitate its spring cleaning and ensure it lasts over time. Wood must be dry to be used in the stove.

#### ✓ ENSURE YOUR LAWN AND SOIL CAN BREATHE

Trees lose their leaves, which are deposited on the greenery, compromising its health and beauty. To avoid stagnant humidity and development of fungal diseases, periodically collect the leaves.

#### ✓ PROTECT DELICATE PLANTS FROM THE COLD AND HARVEST SEASONAL FRUIT

You are advised to protect the more delicate plants using the specific covers (complete range in the COLD DEFENCE section). Furthermore, there is fruit to harvest, such as olives, hazelnuts and almonds.

High density, polyethylene monofilament reinforced fabric mesh with side and central selvages. Indicated to harvest small fruit on the ground, such as walnuts, hazelnuts and almonds.

**OLIRETE Q - 60 g/m<sup>2</sup> | OLIRETE Q - 65 g/m<sup>2</sup>**

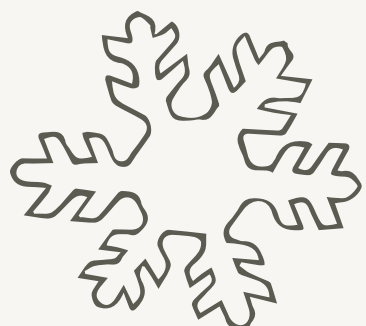

High density, polyethylene monofilament fabric mesh. Run-proof with side selvages. Ideal for harvesting by hand with ladders and shakers. Also available in sheets with eyelets and central opening.

## VEGETABLE GARDEN AND PLANTS CARE - *WINTER*

### Protection from cold

See CODES LIST page XXXI

A complete range of woven fabrics used in the autumn and winter to protect vegetables, flowers and fruit plants, avoiding the sudden first cold and frost damaging crops. Light, permeable to water and breathable, they allow light to filter through and do not hinder the regular development of the protected plant in any way.

# THE COLD IS ARRIVING!

## Correctly protects plants and flowers

### Why should TENAX protective fleeces be used?

Sometimes, we cannot keep all our plants inside, but we can't leave them outside either without adequate protection because they are not suited to low temperatures.

### What can we do to protect them?

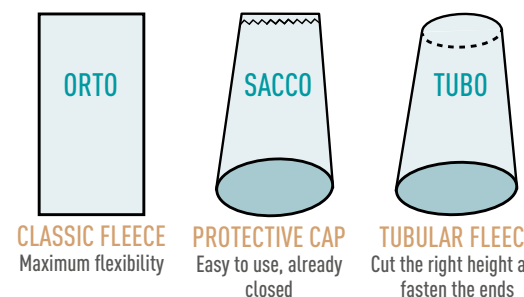

**PROTECT THE ROOTS:** Position the pot over some insulating material (polystyrene or wood). By doing so, it will not absorb cold from the ground. You can also insert the pot in an impermeable bag and fill it with straw. Cover the ground with leaves or mulching material to avoid sudden changes in temperature.

**USE A PROTECTIVE FLEECE:** Protect plants with products from the TENAX CLIMA range, in non-woven fabric, ideal to insulate from the cold, allowing them to breathe. Also perfect to protect crops.

**FIND A SHELTERED PLACE:** Position the plants in a sheltered place, ideally a wall with southern exposure or under a porch. By doing so plants are protected from the wind.

## FOR ALL YOUR NEEDS, THE RIGHT SHAPE

TENAX CLIMA always offers you the right coverage

**17 g/m<sup>2</sup> - MEDIUM FLEECE**  
Ideal for the last of the cold weather, milder climates and the arrival of spring.

\* See chapter EARLY GROWTH on page 67

**30 g/m<sup>2</sup> - HEAVY FLEECE**  
Ideal to protect from the cold of winter in a sheltered position.

**60 g/m<sup>2</sup> - EXTRA HEAVY FLEECE**  
For harsher winters and plants completely exposed to frost.

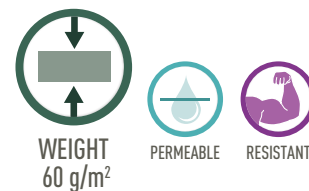

WEIGHT: 60 g/m<sup>2</sup>

## ORTOCLIMA EXTRA

Against the most intense cold

A piece of ultra-resistant non-woven fleece, 60g/m<sup>2</sup> in size. ORTOCLIMA EXTRA is very compact and ideal for protecting delicate plants, herbal hedges and flowers from the very coldest weather, even in areas exposed to wind and violent weather.

### SHAPES AND COLOURS AVAILABLE

## LEVEX TUBE

Clean gutters under trees

Tubular mesh resistant to atmospheric agents, it prevents leaves blocking gutters. It adapts to the diameters of gutters from 12 to 15 cm, it is modular and does not require maintenance for many years: good savings in terms of time, fatigue and money.

- ✓ It does not rust or rot
- ✓ It stops birds nesting in the gutters
- ✓ It ensures perfect flow of rain water

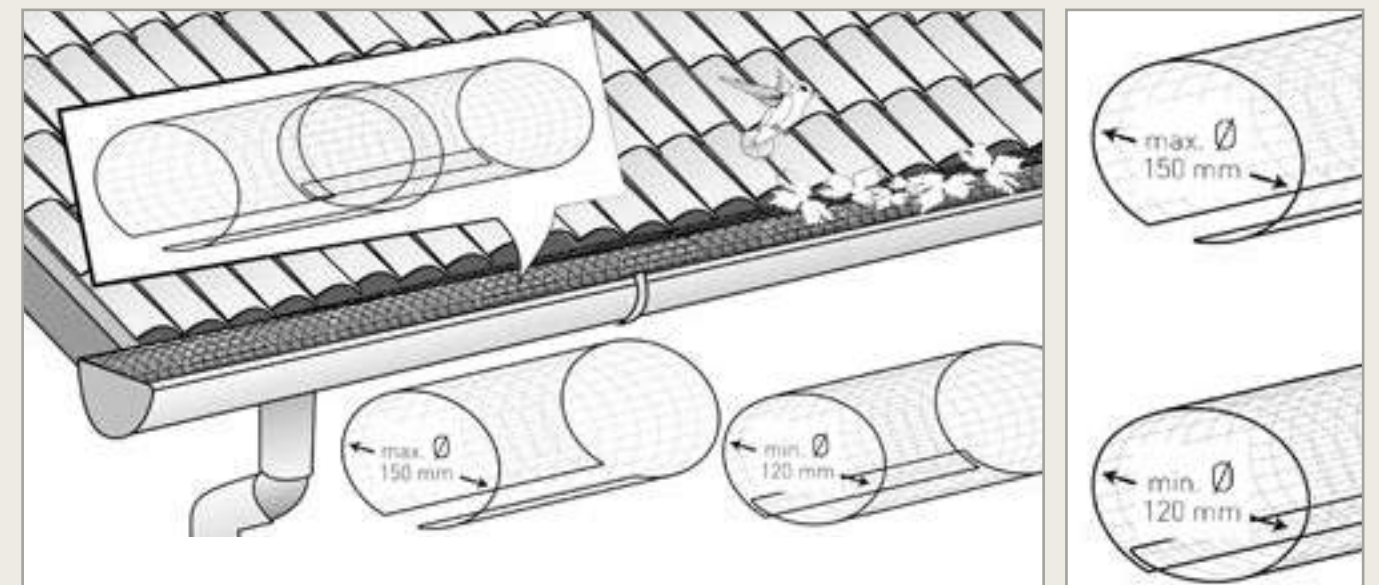

SHAPES AND COLOURS AVAILABLE  
See CODES LIST page XXXIII

Prepack - Roll  
1 m

## Installation

NO NEED OF FASTENING ACCESSORIES

### Easy to install

The TENAX LEVEX TUBE is a tubular mesh with a practical 1 m long format. It is light and easy to manage for simple and fast DIY installation. The tube is cut in length, therefore it easily adapts to a gutter diameter from 120 to 150 mm. Twigs and leaves will be pushed out by the mesh removed with the wind, thereby ensuring perfect flow of rain water.

## DIY AND HOUSEHOLD CARE

### Mosquito nets

See CODES LIST page XXXIII

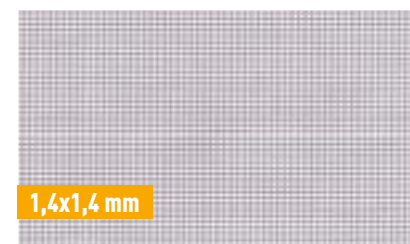

To protect against mosquitoes, flies, spiders and insects, three nets in different materials and colours: in fibreglass, ideal for house windows; in aluminium, resistant and also suitable to screen small openings at home, in courtyards or gardens; in plastic, multiuse and versatile, they combine aesthetics and convenience.

# MOSQUITOES AND INSECTS

## How to defend your home

To defend the walls of your home, the first and indispensable method is to install mosquito nets on your windows and French doors.

TENAX mosquito nets give considerable protection against mosquitoes, flies and insects, and thanks to the focus of the human eye beyond the net, are almost invisible. They come in fibreglass, aluminium and plastic.

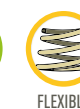

1,4x1,4 mm

### TROPICAL

The fibreglass insect screen

Lightweight, it can be cut with scissors (it does not unravel) to fit to any structure. As it is washable, it can be stored away at the end of the season. Available in different colours and sizes.

Highly resistant and rigid, it can be shaped and adapted to any structure, also for agricultural and animal breeding purposes.

# MOSQUITO NETS

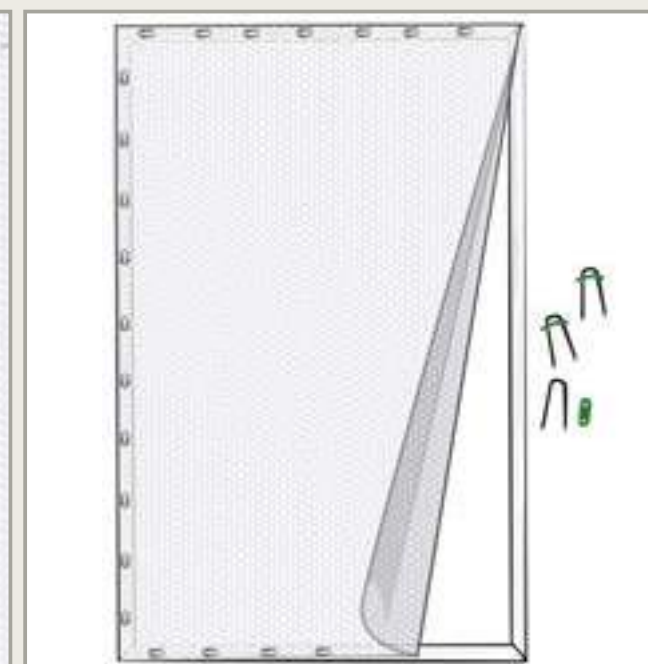

## Installation and accessories

USE TENAX ORIGINAL ACCESSORIES

### Assembly requirements

You will need a suitably measured frame, a hammer, a TENAX mosquito net and TENAX STAPLES for fastening.

### Fastening the mosquito net

Cut the mosquito net to the desired size and position it on the previously assembled frame. Proceed to fasten the mosquito net along the entire profile of the frame, using the TENAX STAPLES.

## DIY AND HOUSEHOLD CARE

### Slip-proof

See CODES LIST page XXXIV

The innovation and experience of TENAX extends from the garden indoors with the new slip-proof mesh, offering top performance to keep household rugs in place.

**NEW 2015**

**ALT**

New slip-proof mesh for rugs

SLIP-PROOF

NICE PRICE

EASY TO CUT

Slip-proof EVA mesh to keep household rugs in place. Efficient, light, flexible and easily shapeable. Ideal for underfloor heating with panels, too.

- ✓ High level of grip: ensures the highest efficiency level on the market
- ✓ Very competitive price
- ✓ Easy to cut to size
- ✓ Hand washable, doesn't suffer damage from detergents
- ✓ Resistant to fungus attacks
- ✓ Low allergenic levels
- ✓ Doesn't dry up
- ✓ Completely non-toxic

To keep the product's gripping power at its maximum, customers are advised to simply wash the product by hand (not in the washing machine) to get rid of dust. Place the rougher part in contact with the ground
