

ELECTRIC STRIKE SMF

An electrical strike proves to be an ideal choice for achieving keyless control over your door. This can effectively be combined with a tag, code, or card system. This lock is designed to be used on single hinged doors for Machine Guarding. No cables in the door leaf are needed since you simply place the electric strike unit in the bracket on the post the cable is preferably routed inside the post. The electric strike unit itself need to be purchased separately to assemble a fully functional door.
