

Machine Guard Door

The Vertical Door is equipped with a pulling gas spring that makes the opening door blade easy to push up and down for manual opening and closing.

The door is available in one size, using the standard 60x40 posts in 2650 height together with two ST30 mesh panels in size 1250x1500. It can be equipped with a proximity switch attached with the Multi Bracket for safety switches mounted on the side of the door blade.

The gas spring is adjusted for the exact weight of this door blade and it's supplied together with the panels, posts and door kit for assembly on site.
